Eisenhower Matrix	Urgent	Not Urgent
Important	• Read through every file in the trash directory • Read .trashinfo files to determine file deletion date • Delete files that have an old enough deletion date	• Support cleaning of arbitrary folders outside of just trash • Add different cleaning modes using file modified, accessed, and created dates • Add different removal modes such as sending files to trash or shredding so they are unrecovable. • Create systemd service so that the program doesn’t need to be run manually • Add support for scheduling the program in different ways
Not Important	• Have a file to store configuration • Parse configuration • Log deleted files into a log file	• Add multithreading support for increased performance • Send file clean notifications (example: “67 files removed from ~/.local/share/Trash.files”) • Implement GUI
